

David Tanis, MBA, PMP, LSSBB, CSCP

AI & Business Systems | Data-Driven Analytics | Process Optimization

MBA in Information Systems · MS in Data Analytics & AI Candidate (2027)

Naples, FL | (239) 241-0188 | tanis226@gmail.com | [Linkedin](#)

PROFESSIONAL SUMMARY

AI and business systems professional who turns ambiguous operational problems into governed, working systems. Combines Lean Six Sigma process analysis with hands-on delivery across discovery, requirements, architecture, phased rollout, and support. Experience spans healthcare, legal, construction, education, and military operations.

CORE COMPETENCIES

Systems Design & Architecture: Relational data modeling, database-level access control, audit trails, authentication, event-sourced change tracking

AI & LLM Applications: Model selection and cost control, structured output validation, agent workflows, evaluation and testing, PII handling

Security & Compliance: HIPAA, FERPA, role-based access control, audit logging, session hardening

Process Improvement: Lean Six Sigma DMAIC, workflow mapping, root-cause analysis, SOP design, requirements traceability

Project Delivery: Stakeholder discovery, requirements definition, phased rollout, user acceptance criteria, deployment and support

Analytics & Reporting: SQL, Power BI dashboards, forecasting, budget-to-actual analysis, KPI reporting, predictive modeling

PROFESSIONAL EXPERIENCE

ZLDA Group

Naples, FL

Business Systems Architect · Co-Founder

June 2024 – Present

- Partner with operators to map how their business runs, translating constraints, exceptions, and manual workarounds into requirements and system designs that get built.
- Design, build, and deploy business systems spanning customer intake, ordering and fulfillment, scheduling, client portals, and internal operations tooling, from initial build through deployment and ongoing support.
- Consolidate customer-facing intake and back-office operations onto a central database in every engagement, eliminating separate systems, synchronization layers, and duplicate entry.
- Run practice operations: engagement scoping and pricing, client relationships, contracting, and finances.

Florida SouthWestern State College

Fort Myers, FL

Adjunct Professor, Business & Technology · Contract

Starting Aug 2026

- Appointed to teach undergraduate business and technology coursework within the School of Business and Technology beginning August 2026.

Premier Inpatient Partners

Naples, FL

AI & Process Automation Lead · Contract

Feb 2026 – May 2026

- Architected and delivered a HIPAA-aligned MSO administrative platform serving 10 administrative staff and 80+ physicians across HR and Operations, with no pre-existing technical infrastructure.
- Replaced roughly 20 disconnected spreadsheets with a single system of record, eliminating the stale-data errors and version conflicts that came from staff working off separate copies.
- Conducted stakeholder discovery across three departments, translating business needs into user stories, acceptance criteria, and technical design documentation that guided phased delivery.

Studio+

Fort Myers, FL

Project Administrator

June 2024 – Oct 2025

- Led project financial accounting for a six-office architecture firm across contract setup, time capture, billing, and financial reporting.

- Strengthened contract and billing compliance by reviewing workflows, identifying gaps driving billing inconsistencies and rework, and standardizing procedures that reduced revenue leakage.
- Partnered with project managers and finance leadership on forecasting, budget-to-actual analysis, and resource allocation, facilitating weekly reviews against targets and milestone-based revenue recognition.

Elite Permits

Permit Coordinator

Fort Myers, FL

Jan 2024 – June 2024

- Managed end-to-end permit processing across jurisdictions and streamlined administrative workflows, reducing permit processing time 15% while maintaining regulatory compliance.

The Sheppard Law Firm

Intake Coordinator / Admin Assistant

Fort Myers, FL

July 2022 – Jan 2024

- Improved client intake efficiency 30% through an intake redesign in Decision Vault that automated manual tasks and improved accuracy; partnered with IT to integrate the firm's CRM with Outlook for firm-wide calendar visibility.
- Implemented an AI-assisted legal dictation workflow that reduced transcription turnaround 50%, accelerating document production.

Naples Community Hospital (NCH)

Telemetry Monitor / Unit Secretary / Patient Registrar

Naples, FL

Feb 2018 – July 2022

- Identified a hospital-wide telemetry alarm configuration issue delaying response to critical arrhythmia alerts; recommended corrective updates that improved monitoring protocols and patient safety.
- Delivered accurate admissions and records management in high-volume settings through the COVID-19 pandemic; earned two consecutive Secretary of the Year nominations while training new clinical support staff.

MILITARY SERVICE

U.S. Navy Reserve

Construction Mechanic (Seabee), CMCN (E-3)

Tampa, FL

July 2017 – Oct 2023

- Enlisted at 17 after scoring in the 94th percentile on the ASVAB; drilled with Naval Mobile Construction Battalion (NMCB) 14 while working full-time in healthcare and carrying a full undergraduate course load.
- Executed the full maintenance cycle on heavy construction equipment under Navy technical procedures: inspection, diagnosis, scheduled maintenance, repair, documentation, and readiness reporting; earned Unit Maintenance Person qualification.

EDUCATION

Florida Gulf Coast University · Lutgert College of Business

Fort Myers, FL

Master of Science, Data Analytics & Artificial Intelligence

Expected May 2027

Coursework spans predictive modeling, machine learning, statistical modeling, SQL, AI strategy, and AI-enabled decision support for business operations.

Graduate Certificate, Artificial Intelligence & Machine Learning

Expected May 2027

Master of Business Administration, Information Systems

May 2026

Information systems, IT management, applied economics, business process improvement, data-driven decision-making, and systems strategy.

Bachelor of Arts, Integrated Studies · Minor in Economics

May 2024

Multidisciplinary foundation in economics, analytics, business strategy, and quantitative reasoning.

CERTIFICATIONS

Project Management Professional (PMP): Project Management Institute (2026); PMI Member

Lean Six Sigma Black Belt (LSSBB): Educate 360 (2024)

Certified Supply Chain Professional (CSCP): ASCM (2025); ASCM Professional Member

Enterprise Design Thinking Practitioner: IBM (2025)

Google Project Management Certificate: Coursera (2023)

Notary Public: State of Florida (valid through September 2027)

TECHNICAL PROJECTS

Compliance Tracking & Document Generation | K–12 Special Education

TypeScript · Prisma · Postgres · LLM tooling

Keeps every student's IEP current and drafts the compliance paperwork the team files. Built after seeing the problem in a Los Angeles school system.

- Tracks each student's plan and deadlines in one system, replacing separate files, with every edit stored as a proposal a staff member approves and showing where the value came from.
- Drafts the required paperwork with AI held to a fixed format, student data stripped from prompts before they leave the system, and spending capped per task.
- Designed to support FERPA-related records requests, audit history, scheduled deletion, and school-level data separation.

Online Store & Project Portal | Classic Automotive

Next.js · React · TypeScript · Neon Postgres · Stripe

Online store and customer portal for a classic car restoration shop, plus a project portal to track products they're developing.

- Delivered in four phases, ending with the storefront and the internal project portal running on a Postgres database.
- Gave staff access that can be changed or revoked and takes effect on the next request, using custom session auth with signed cookies and scrypt hashing.
- Keeps completed orders accurate through catalog changes by writing price and variant onto the order itself, backed by an append-only audit trail.

Online Ordering & Scheduling System | Bakery

Vanilla JS · Netlify Functions · Neon Postgres · Stripe · Twilio

Takes web, phone, and walk-in orders into a single queue for a bakery, replacing a fully manual order process.

- Lets customers select only pickup dates the bakery can fill, with fulfillment windows, cutoffs, blackout dates, and lead times resolved server-side in the bakery's timezone.
- Protects customers from duplicate charges and duplicate texts through an idempotent Stripe webhook handler and a nine-state order lifecycle enforced on the server.

Lead Capture & Client Portal | Home Services

Next.js · Supabase · TypeScript · Tailwind

Public website and client portal on one database, turning every inbound inquiry into a tracked lead. Live, managing the company's existing client base.

- Limits every client to their own records through row-level security policies in Postgres.
- Keeps photos of client homes private, served from protected storage through links that expire.
- Signs clients in with Google or Apple and sets up their account and permissions automatically.

Regulatory Rules Engine | Professional Sports

Next.js · React · TypeScript · Neon Postgres · Python

Checks a proposed NBA trade against the league's 2023 collective bargaining agreement and identifies the rule violated and how to correct it. Built to test whether a dense regulatory framework could be encoded faithfully enough to produce auditable determinations.

- Calculates each team's spending limit from the terms of the deal, with the credits, charges, and prior-season penalties that decide legality modeled as their own tables.
- Cites the section it enforces on every finding, with each rule written as deterministic TypeScript and AI kept out of the correctness path.
- Weighs all four ways an over-limit trade can still be legal in a single rule: minimum-salary absorption, trade exceptions, cap room, and non-simultaneous trades.

TOOLS & PLATFORMS

AI & LLM: Anthropic API, OpenAI API, MCP servers, Claude Code, ChatGPT/Codex

Languages & Frameworks: TypeScript, JavaScript, SQL, Python, React, Next.js, Tailwind

Data & Reporting: PostgreSQL, Supabase, Neon, Prisma, Power BI, Advanced Excel

Cloud & DevOps: Azure, AWS, Terraform, GitHub Actions, CI/CD, automated testing
